SalesDesk.

Sell more: your AI sales analyst.

A morning queue. Ready to approve.

Before

Search the CRM for cold leads

Check if their car sold

Call other stores for stock

Write every follow-up

After

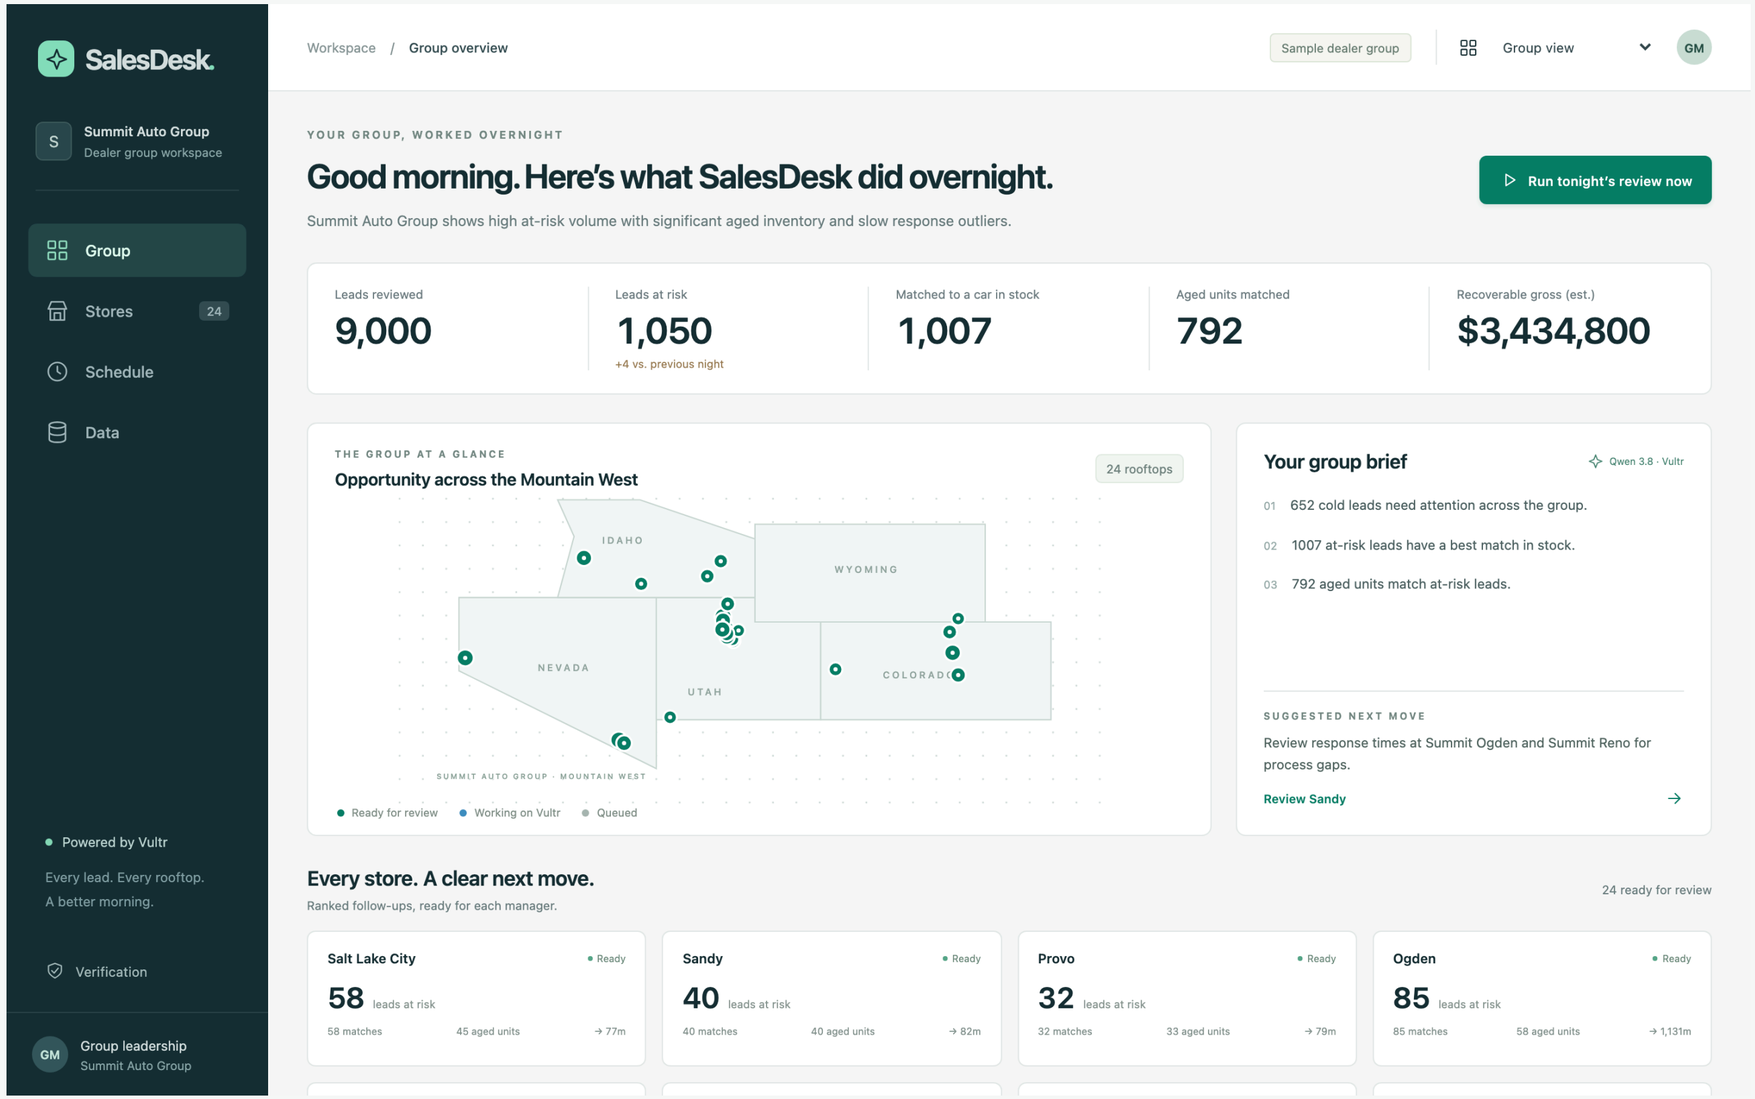

Open SalesDesk

Approve a ranked queue

Full 24-store review: 124.2 seconds (2.1 minutes) on Vultr, measured.
Sample dealer group · No measured human time savings or sales uplift claimed.

Leadership sees the whole group.

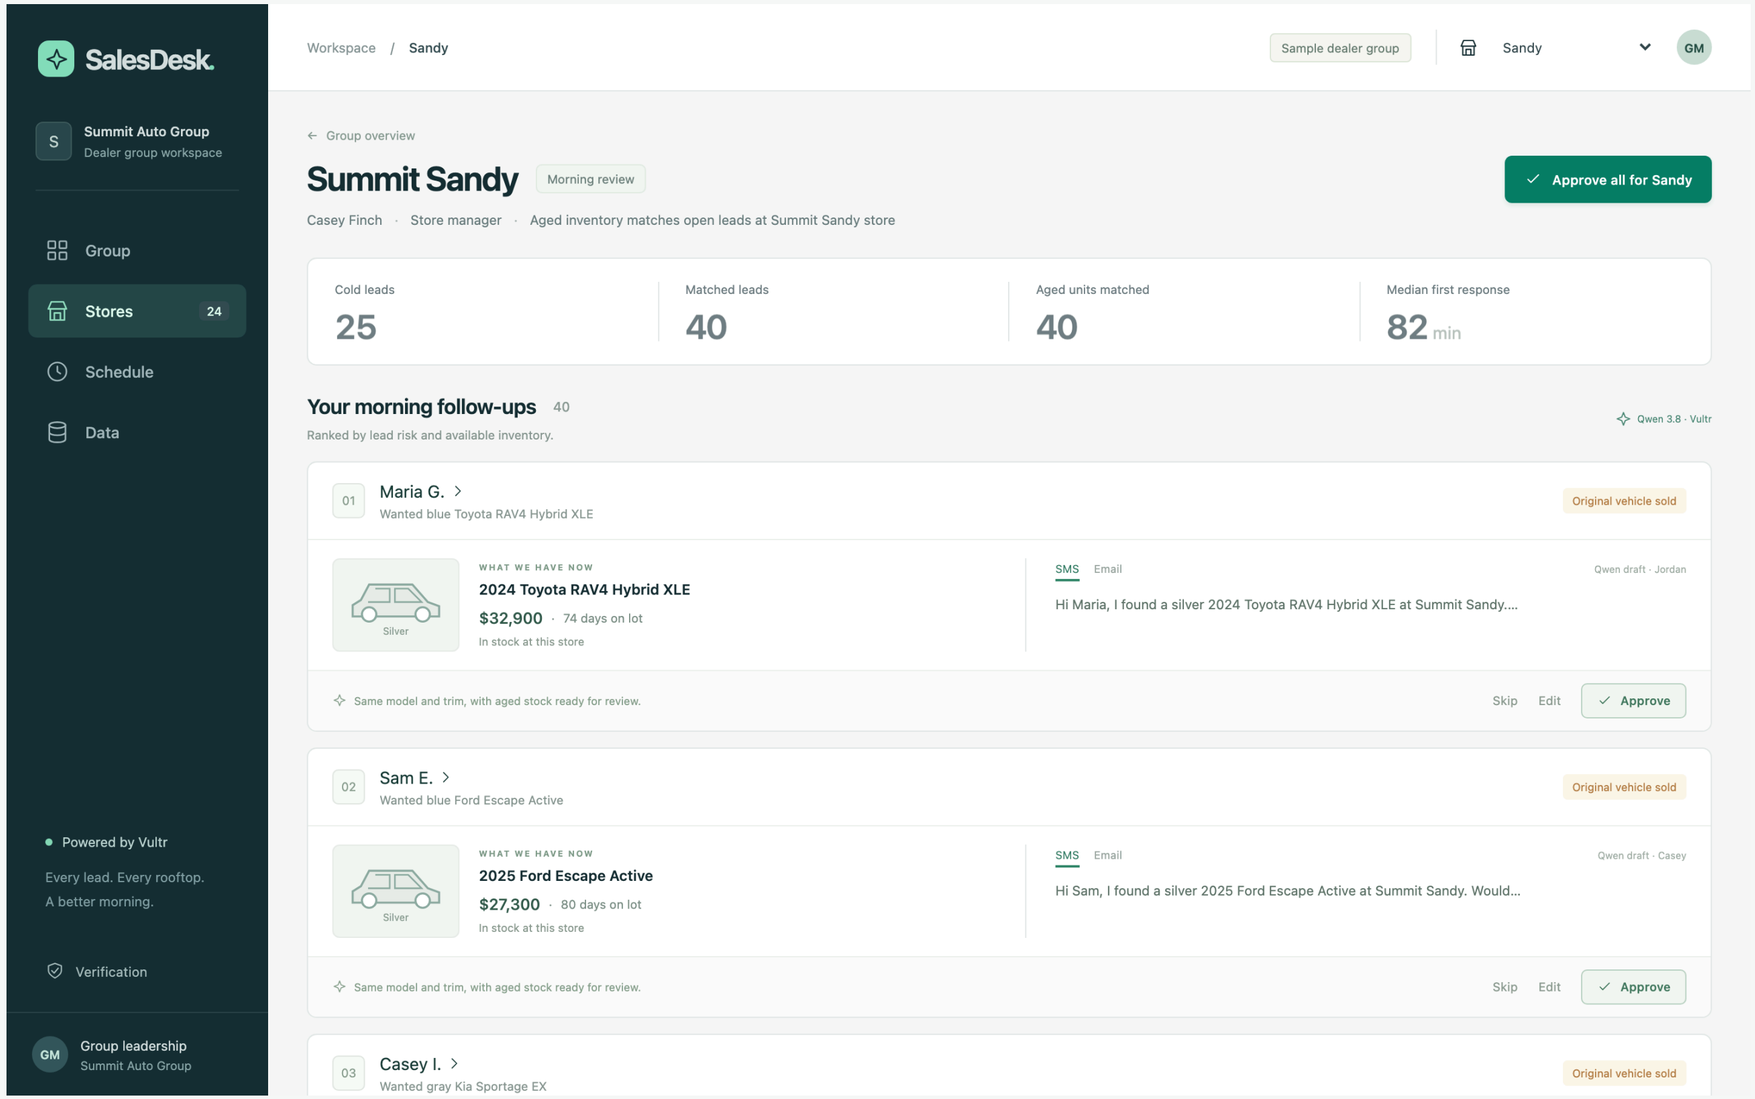

9,000 leads reviewed.
1,050 at risk.
1,007 best matches in stock.
792 distinct aged units matched.

Actual public app capture · Sample dealer group · Fictional people and data

Store managers get a ranked queue.

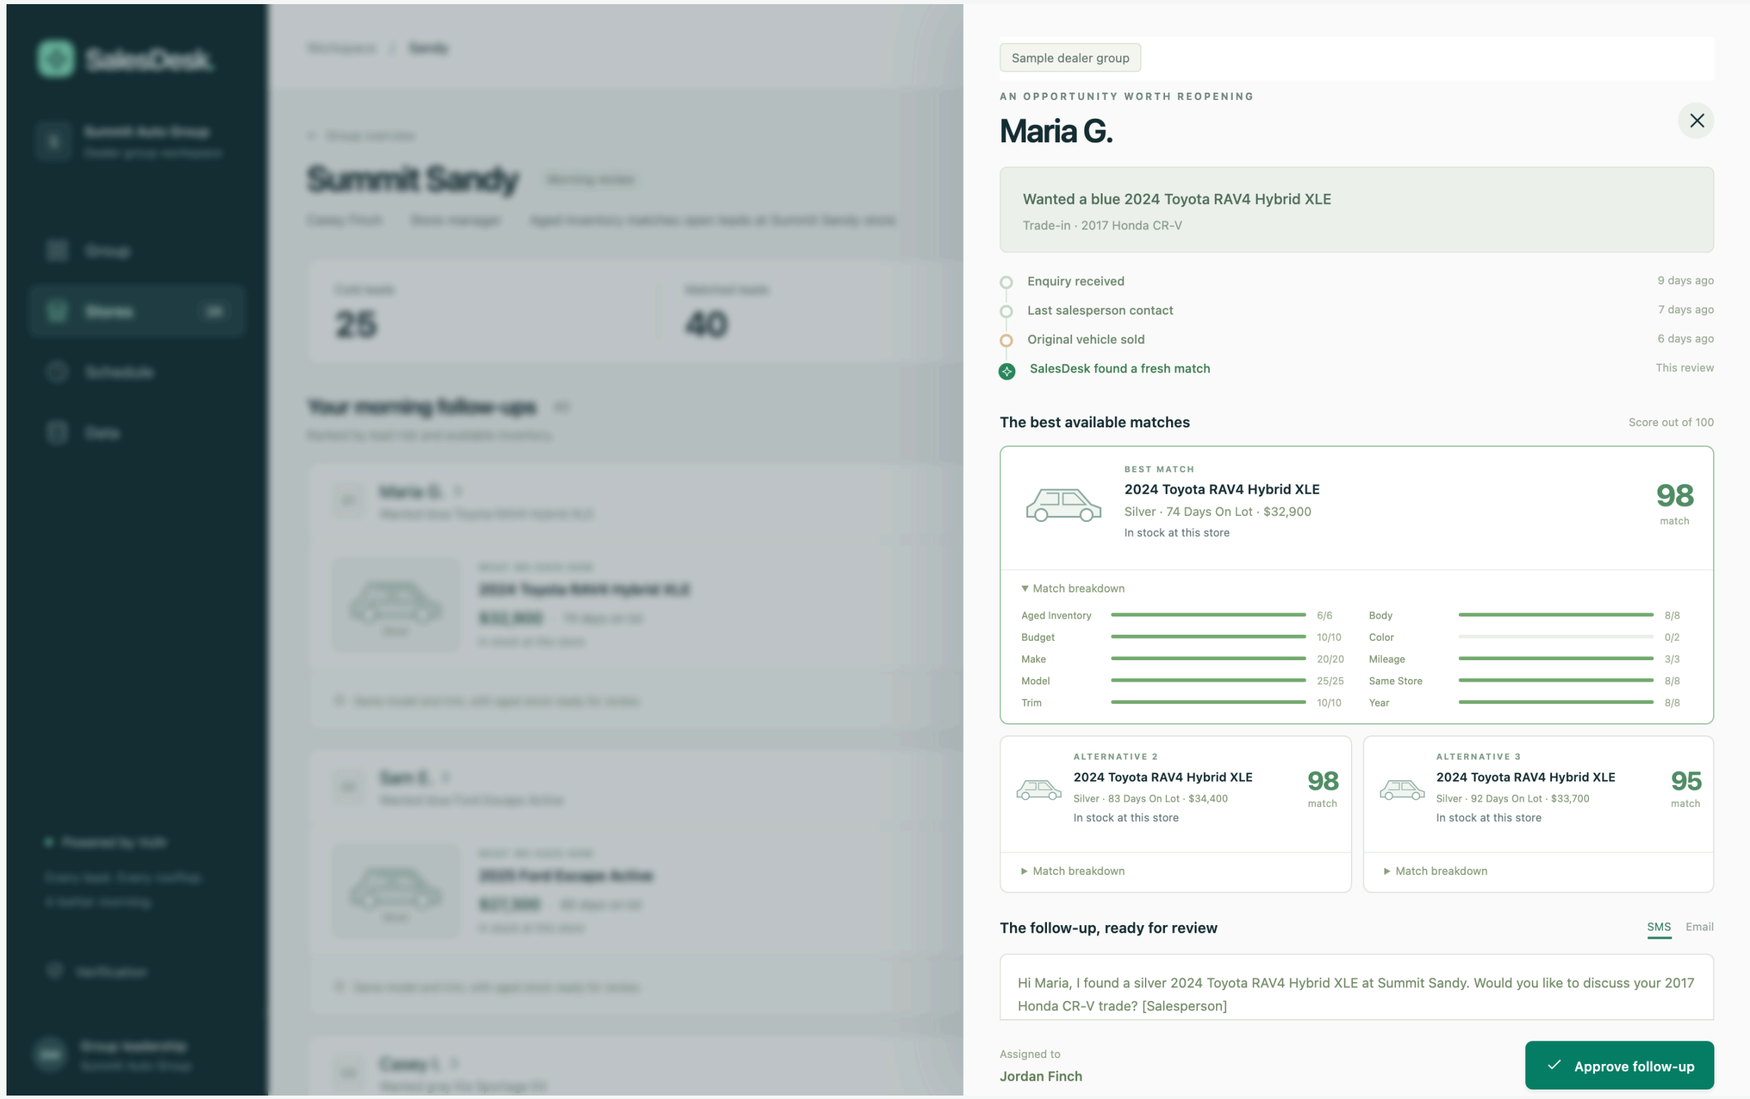

Sandy: 40 follow-ups. Risk, available inventory and trade context together.

Actual public app capture · Sample dealer group · Fictional people and data

A fresh reason to follow up.

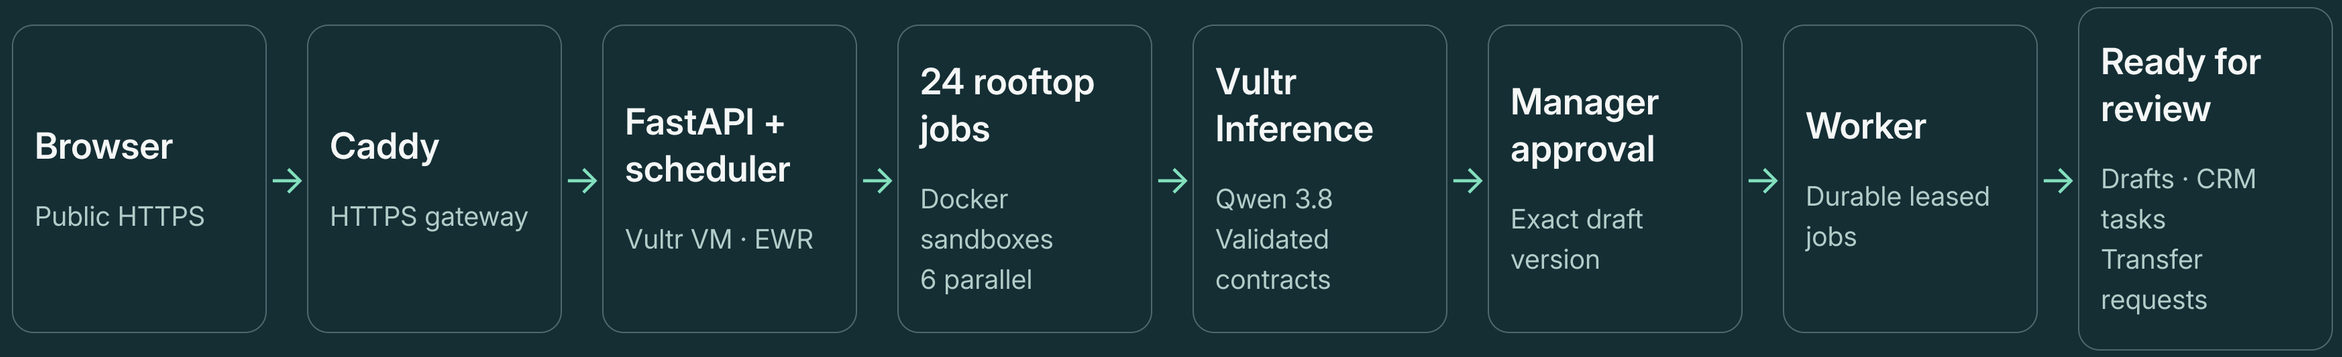

Maria G.
Silver RAV4 Hybrid XLE.
74 days on lot.
2017 Honda CR-V trade.

Actual public app capture · Sample dealer group · Fictional people and data

Built on Vultr

Every rooftop reviewed. Every action approved.

Sandboxed analysis → reconciled metrics → Qwen briefs and drafts. The controller holds credentials and budgets. People approve the exact draft; the worker prepares downloads. No customer messages are sent.

SalesDesk · Powering the Future of Work · Vultr Agent Rush

Measured, inspectable work

AI drafts.
People approve.

CSV input today. CRM / DMS connections next.

Exact version approvals; editing clears approval.

Revalidated replay is labelled. New inputs use bounded live inference.

Nothing is sent to customers.

Measured live inference: $0.0077789 per complete 24-store run.
25 provider responses at catalog token rates; VM billing separate. Not a billing receipt.
